# **“Weak Signals” for Burning Issues**

**European  
Millennium  
Project Nodes  
Initiative**

**The Futures of Europeans in  
the Global Knowledge Society  
A Meeting Place for  
Europeans creating Futures**

April, 13-14, 2005 - Louvain-la-Neuve, Wallonia, Belgium

# Shocks out of the blue!

- Can we prepare?
- Are there **weak signals** before the event?
- How can we identify them?
- Which ones are relevant?

Or:

- Being wise after the event...

# The Future: A Blind Spot?

The observer  
doesn't see  
that he doesn't see  
what he doesn't see.

© Heinz von Foerster

Is the future developing behind the backs of the futurists?

# Portents of the Future

## “On the radar”

## “Not on the radar”

### Continuities (“trends”)

- Shifts in the markets
- Demographic change

### Continuities (Hidden long term change like)

- Hormones in the environment
- De-secularisation

### Discontinuities

- Change of government after an election
- Merger of companies
- Road mapped innovations

### Discontinuities

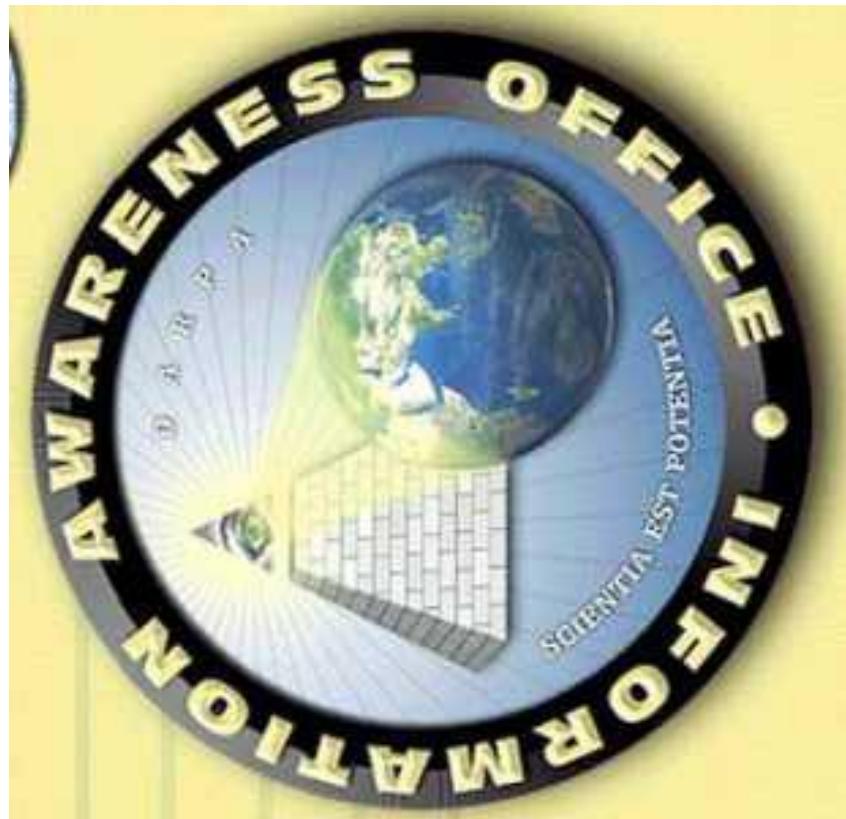

- Breakdown of US economy
- Disruptive innovations and their impacts
- Decline of life expectancy

**Two kinds of weak signals?**

# Weak signals on the radar

- Large quantity of diverse, sometimes unstructured data
- Use of filters and evaluation
- Intelligent, automated systems?

The more narrow the scope,  
the better automated systems work.

# Weak signals for emergent developments (not on radar)

## Problems

- Recycling of ideas:  
futurists quoting futurists
- Lack of concepts and  
notions for new  
developments
- Lack of monitoring /  
analytic methods
- Observe marginal ideas &  
groups!
  - “Trendsetters”
  - Artists
  - Science Fiction
  - Socially excluded persons
  - Youth
- Give room for crazy ideas!

“This is a good idea – but is it crazy enough?“

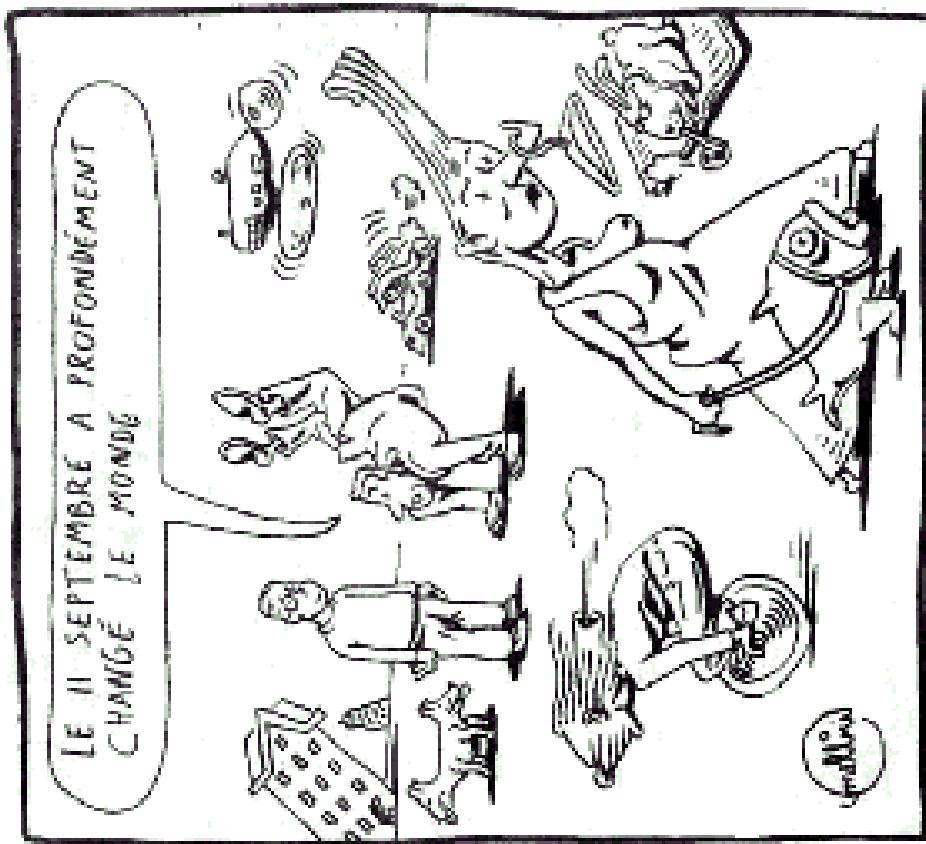

# Wild Cards – unexpected discontinuities

Weak signals may herald  
the advent of a  
**wild card!**

Sudden events with:

- Low probability  
(less than 0.1)
- High impact
- Surprising character

Wild cards are earthquakes of the mental landscape!

# Problems with identifying weak signals

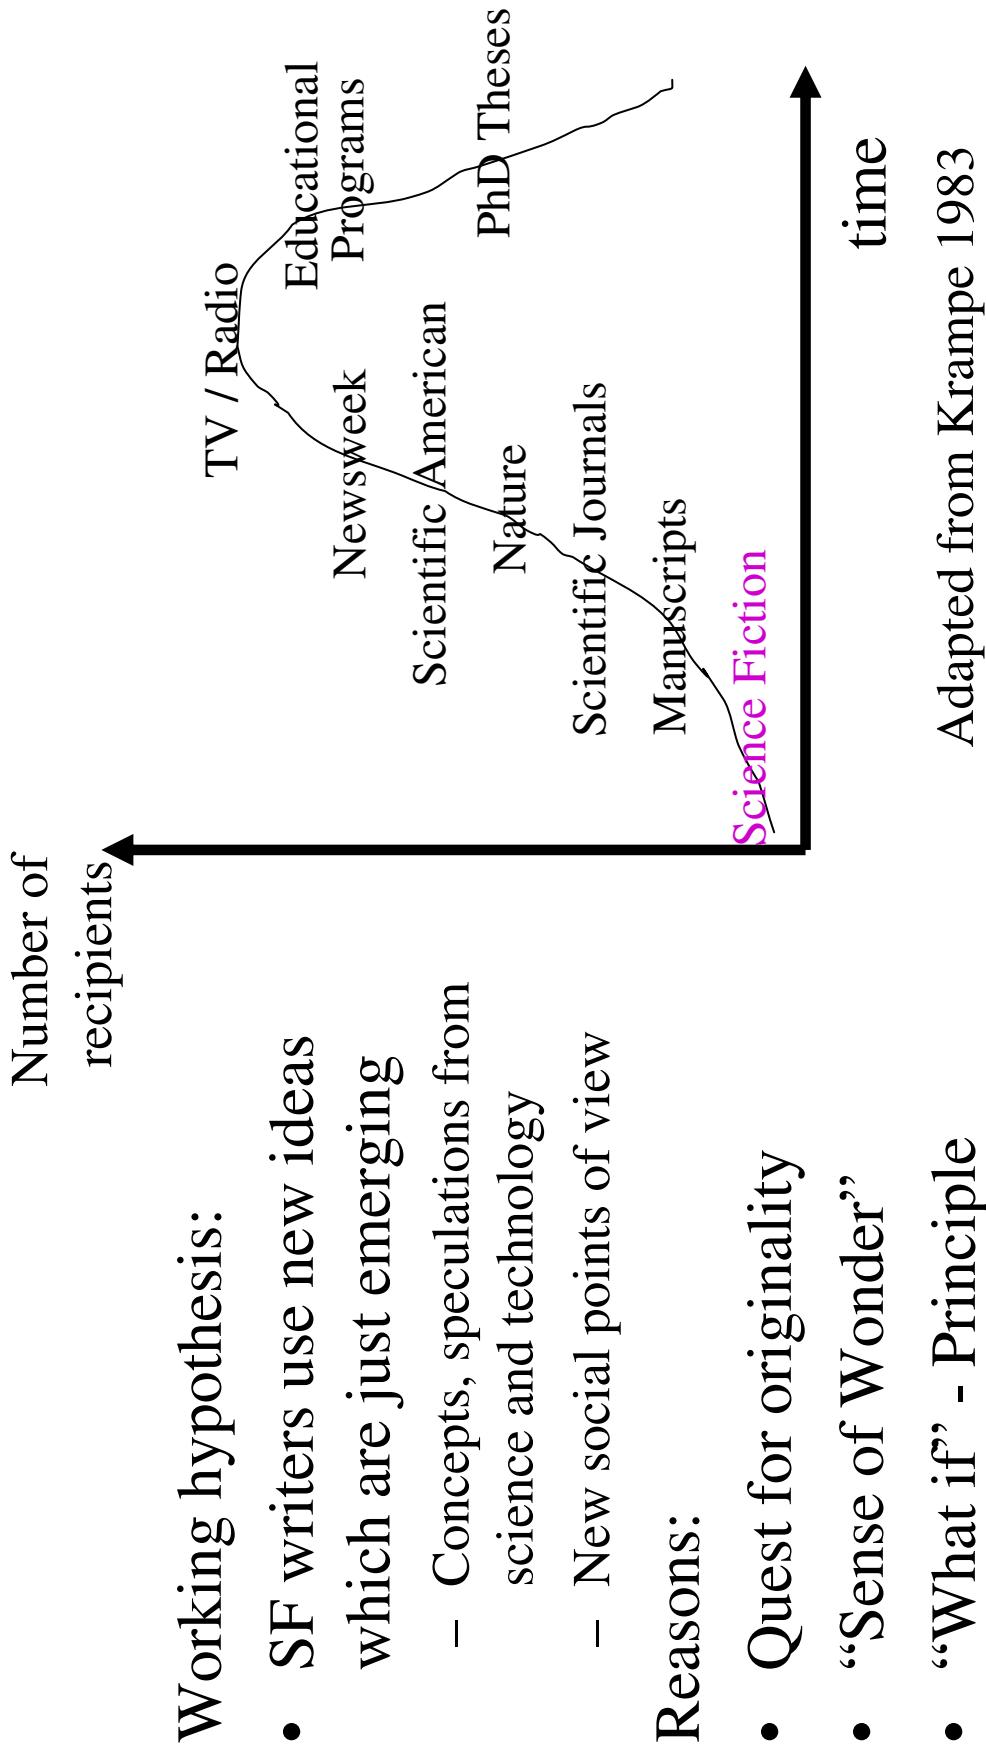

- Where to look?
  - How to go beyond a perhaps too narrow horizon?
  - What are appropriate filters for a monitoring?
  - All systematic approaches may exclude the most interesting emergent things!
- Does it make sense to look for implausible or impossible things?
  - And how could I communicate them?

There are too much and never enough weak signals ....  
Not even the strong signals are listened to!

# Science fiction as an early warning system

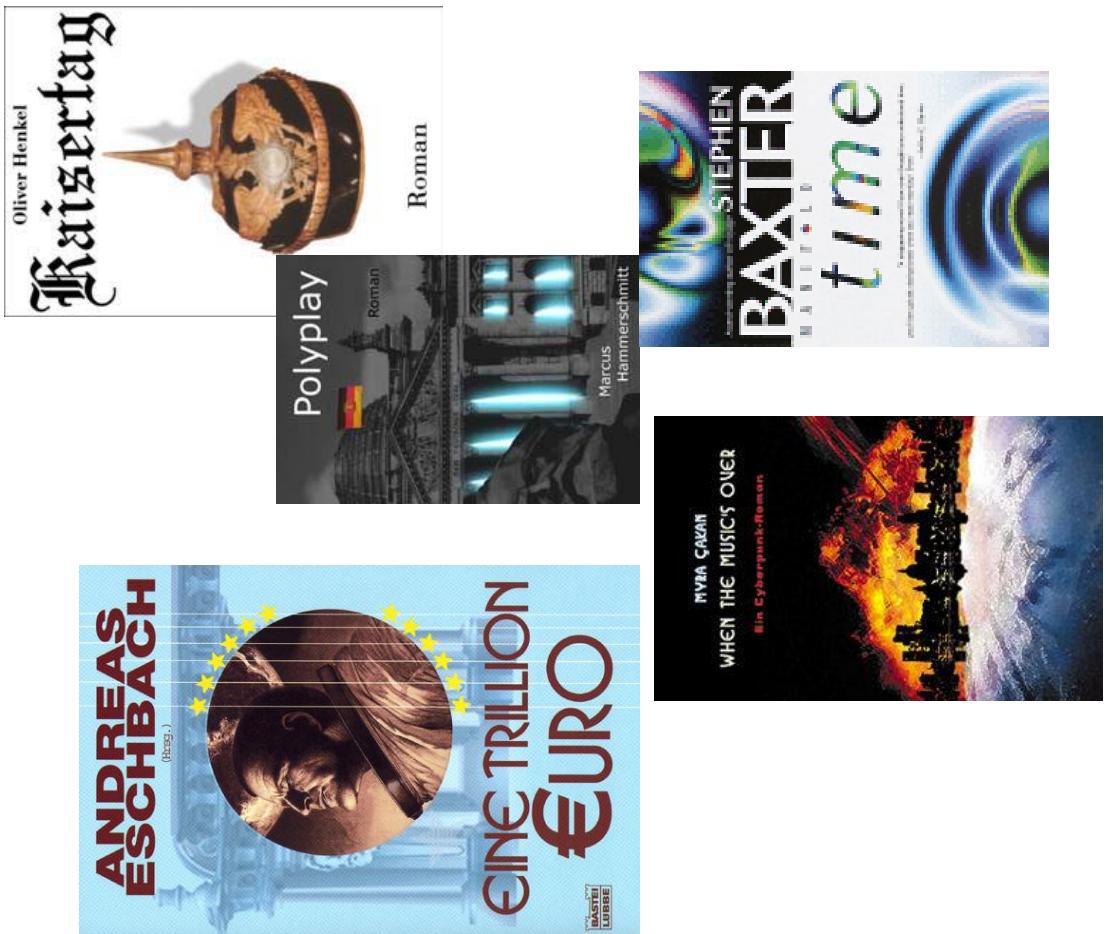

# Weak signals from science fiction?

Some topics:

- Many alternative history novels
- Birth of a new human race within the old
- New cults of irrationality
- Europe is nearly absent
  - No positive vision of Europe!

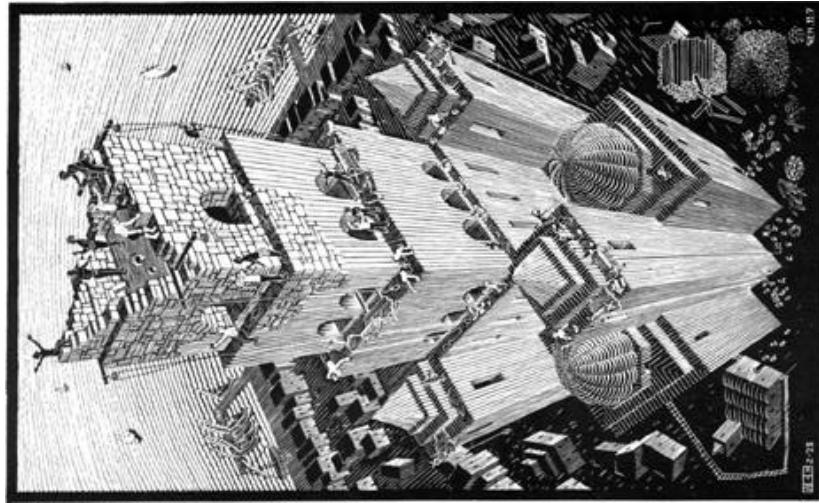

# Weak signals to burning issues?

## Some recent news:

- Failure of EU service directive
- Rising opposition to EU constitution
- Quarrel on Turkish candidature
- Failure of Germany, France, Italy to comply to Maastricht criteria
- Growing intra-European disparities
- Goodbye to Lisbon goal
- ...
- **BUT:**  
Jeremy Rifkin:  
“The European Dream”  
(2004)

Escher: Tower of Babel

## Questions:

- Are these weak signals?  
(Or strong signals?)
  - What is their message?
  - Is there anybody to listen?

# Conclusion

**Mark Twain:**  
“Forecasting is very difficult,  
especially about the future.”

## Steinmueller’s Rule:

“The easier forecasting is, the  
lower is the intellectual and  
practical benefit of it.”

MURMANN

# WILD CARDS

Wenn das Unwahrscheinliche eintritt

► Telefonieren macht krank  
Eine Pionierrolle bei Öffentlichen Funk und zum Zusammenschluss der Mobilfunkbetreiber  
WAHRSCHEINLICHKEIT = ●●●●● WIRKUNGSSTÄRKE = ●●●●●

► E-Cash goes Globo  
Ein digitales Zahlungsmittel im Internet erhält die Passionszettel von Web-Bürgern  
WAHRSCHEINLICHKEIT = ●●●●● WIRKUNGSSTÄRKE = ●●●●●

► Weltfinanzcrash  
Ein Zusammenbruch der globalen Finanzmärkte ist eine Wahrscheinlichkeit  
WAHRSCHEINLICHKEIT = ●●●●● WIRKUNGSSTÄRKE = ●●●●●

► Wirtschaftskrisen auf der ganzen Welt  
Krisen sind logischerweise kein normales Ereignis  
WAHRSCHEINLICHKEIT = ●●●●● WIRKUNGSSTÄRKE = ●●●●●

► Wirtschaft = Innovation  
Innovation ist kein normaler Prozess  
WAHRSCHEINLICHKEIT = ●●●●● WIRKUNGSSTÄRKE = ●●●●●

► Frühindustriestandorten = Heute dominieren die Finanzmärkte  
Alte Wirtschaft auf der ganzen Welt ist in den Rücken  
WAHRSCHEINLICHKEIT = ●●●●● WIRKUNGSSTÄRKE = ●●●●●

► Wirtschaft = Alte Kita  
Geschäftswelt ist veraltet  
WAHRSCHEINLICHKEIT = ●●●●● WIRKUNGSSTÄRKE = ●●●●●

► Sowjetunion = Mit einer sozialen Basis, die wirkt (egal)
